

BUILDINGS AND GROUNDS REPORT – MARCH 2016

B&G-- The fast snow melt is raising problems with new and unusual roof leaks. There are a couple of roof drains that will have to be resealed when it dries up this spring. The boilers and circulating pumps are working great and I will get a good idea of how much they saved us at the end of the heating season.

Transportation and vehicles---The DOT performed the bus inspections last week and all went well. All vehicles will get serviced this spring break.

Safety and crisis management---The new fire control panel will be installed over spring break. I just returned from the WSSCA school safety class and finished module 6 of 12 for safety and security. We will be continuing to work on the school emergency crisis plan as there are a few more critical aspects to hammer out. The next steps are to develop partnerships and agreements (written) with other agencies than will be incorporated into our crisis plan.

Planning and Projecting-- DSGW will be at the Board meeting to discuss how an addition to the Rec Center would look. Scott Armstrong will be there also to tell us how much use the Center is receiving. Hoping to replace the mini bus and bus #2 with new ones this year.

Staffing---Nothing to report
