

IT Systems Administrator Report

January 4, 2012

1. Hardware and software updates, and network analysis are a continuing project. I am assessing priorities for the rest of this year, and next year.
2. As updates have come out, I have been continuing work on management of Apple iPads and other iOS devices and determining the best practices to deploy them in school. We have a few of these devices now that will soon be deployed.
3. I have restored one of the terminal services servers that was down.
4. Google Apps for education is up and running for the District. I have begun adding users, and I will be working with new users as they are added.

Chris Plansky
IT Systems Administrator
