

IT Systems Administrator Report

June 4, 2013

1. Work has continued on updating the District Technology Plan. Budget information has been added, along with other updates. The plan is being submitted for approval by the Board at this meeting. We are using the new DPI technology plan template. The design of the template makes the District's Technology Plan a "living" document, that can be updated as technology and the District's need change.
2. Planning for next year is ongoing. Summer projects will include updating the wireless network infrastructure, installation of a new telephone system, adding an additional virtual machine host, migrating more production servers to the virtual environment, wiring and computer updates in the business education lab, new digital signage, and migrating email service to Google Apps for Education. It will be a busy summer for technology upgrades. In addition, all student computers will be updated with "fresh" images containing security updates and new software.
