

IT Systems Administrator Report

December 5, 2012

1. The Wisconsin state ISES reporting is done, reviewed and locked. The next round of ISES reporting is the Coursework Completion System reporting, which will start after the end of first semester.
2. I have been working on documenting the network infrastructure to aid in troubleshooting network issues. So far, I have mapped out the network switch system, and made some changes and upgrades to improve reliability and speed. I will also document the network servers and the roles they perform.
3. I have been working with new network management software to deploy software and updates to computers automatically. This provides users with more up-to-date software, and also keeps the network more secure by deploying security patches more rapidly.
4. Other ongoing and possible future infrastructure projects include server virtualization, increasing the capacity of the wireless network, replacing the telephone system, and switching to Google for email.
5. The tech committee is working on updating the District Technology Plan. Our current plan expires next year.

Chris Plansky
IT Systems Administrator
